Introduction

STEIN helping to support humanitarian Aid Relief

Disaster Arborist Response Team

STEIN are proud supporters of DART

DART provides teams of rapid response, experienced and qualified arborists, equipped to support disaster relief operations worldwide, so that trees that have become a danger are treated or removed and wherever possible continue as a vital source of food, shelter and raw material. The DART team can respond to natural disasters fully equipped for self sufficiency in the field. They take supplies of food for seven days and basic personal medical equipment. They work effectively and safely for the benefit of the people they are going to help. They do not drain resources and are happy to construct their own shelters to stay in whilst on deployment. DART also offer extensive training programs in areas of deprivation enabling the local inhabitants to work together in re-developing their own communities.

STEIN UTILITY Range

KRIEGER
SENTINEL
RAIL

Introducing a range of products design specifically for the Rail and Utility Sector.

Your SAFETY is our priority

SATRA is a Notified Body for various European directives including personal protection equipment (PPE), which is one of SATRA's largest sector operations. Their research, development and testing has helped improve the performance, quality and safety of a wide range of products and materials the world over.

Notified Body number **CE 0321**

- All pictures & illustrations shown in this publication are examples of use only and are not intended as instructional aids.
- You should seek professional training from a fully qualified and competent person prior to engaging in any activity using the type of equipment shown in this publication. You are solely responsible for your own actions and of the safety of the people around you.

STEIN®

STEIN products have been developed to provide the industry with the high level of protection and safety expected from modern day equipment. With ever evolving techniques and requirements STEIN prides itself on evolving with the industry.

We continually invest in research and development projects to bring you the professional user, a range of products which meet the demands faced on a daily basis. To ensure that STEIN products continue to evolve we continually invested to protect the future growth of our product range.

Many of our latest product developments have been field tested around the world to ensure these products can meet all levels of expectation. We use respected industry representatives to both advise and trial products before they go onto general release.

The inspiration behind many of our products, comes from both continued customer feedback and involvement by respected Industry figures.

- 11 • Chainsaw Resistant Gloves
- 13 • First Aid & Bleed Control

Personal Protective Equipment (PPE) is equipment that will protect the user against health or safety risks at work. It can include items such as safety helmets and hard hats, gloves, eye protection, high-visibility clothing, safety footwear and safety harnesses and must meet strict European Standards CE.

To make sure the right type of PPE is chosen, consider the different hazards in the workplace and identify the PPE that will provide adequate protection against them; this may be different for each job.

Choosing the correct type of PPE can be achieved by a detailed risk assessment of the hazards you are trying to protect against.

Personal Protective Equipment (PPE)

GUARDIAN

CHAINSAW PROTECTIVE TROUSERS | DESIGN "A"

KRIEGER GUARDIAN

Utilising an abrasion resistant Multi-Directional Stretch base material ensures the wearer has excellent flexibility in the areas which matter. Kevlar polyamide material offers enhanced wear over normal materials giving increased comfort and movement.

flexi-shape technology

STEIN Orbit safety glasses have been specially designed with flexi-shape technology. These glasses are able to be laid flat and return back to their original shape. This feature makes putting the glasses on single handed easier. The flexi-shape technology make the glasses more comfortable and better fitting on wider heads.

Personal Protective Equipment (PPE)

The STEIN Medium Bleed Control Kit contains the essential medical equipment and supplies required to help save a life in the event of severe life threatening haemorrhage. Assembled with the highest quality components, this kit allows trained First Aiders, Advance Professionals, and First Responders to deliver lifesaving treatment in the event of a severe haemorrhage whilst awaiting the arrival of the Emergency Services. Designed as a grab bag which can quickly be attached to the harness of the Aerial Rescue Climber. It can be clipped up next to the casualty allowing easy access to all the contents should immediate treatment be required whilst in the tree.

FIRST AID | Personal Kit - Standard

The STEIN Personal First Aid pack is a vital piece of equipment which should be carried by Arborists. This compact kit allows you to deal with most common minor injuries caused in the Arboricultural industry. Filled with the essentials you will need for common accidents it ensures that you are prepared for any minor emergency.

- 42 • SRT Products
- 44 • Tree Access Equipment

All items of fall-protection equipment should be used according to the manufacturer's instructions. Climbing equipment should only be used for its intended purpose.

Climbers need to check all equipment for excessive wear, damage or defects before use. Interim inspections of equipment subject to high levels of wear and tear need to be recorded, and climbing equipment should be 'thoroughly examined' and recorded by a 'competent person' on a regular basis.

Withdraw defective equipment from use and destroy it, or mark it in such a way that it cannot be used by mistake.

Climbing Products

STATIC LINE | 32-Strand - 11.0mm

OPIUS ACR-32 is a low stretch static line. OPIUS is ideal for use in rope access, fall safety systems and rescue. OPIUS ACR-32 has a high proportion of sheath to cover ratio which provides improved abrasion protection and reduced sheath slippage.

Climbing Products

CHEST HARNESS | CAMBO

The CAMBO V5 Chest Harness gives increased comfort and performance for aiding the progression of your SRT climbing system.

Size: One Size | fully adaptable to any body size
Standard: Not For Use As PPE

Part Number: **SS-5530027040**

EAN Barcode: 5060483281032

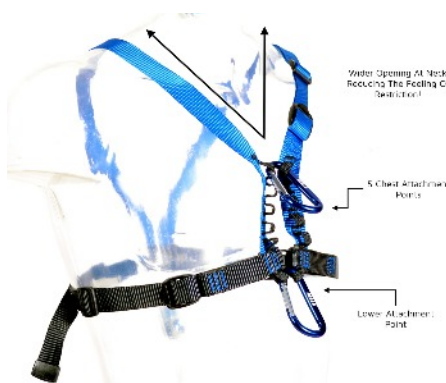

Price Ex VAT: £ 62.50

Price Inc VAT: £ **75.00**

The CAMBO V5 Chest Harness gives increased comfort and performance for aiding the progression of your SRT climbing system.

The CAMBO V5 is fully adaptable to any body size due to the dual adjustment system both for Torso height and Torso width. Specifically designed with an open front V System to alleviate discomfort around the neck and throat region. For added comfort an elasticated chest expander is fitted to reduce the feeling of compression around the chest allowing the harness to be worn comfortably all day without the feeling of being constricted.

CAMBO v5 chest harness

FEATURES

- Open V Front to alleviate discomfort around the neck and throat
- 5 upper attachment points and one lower attachment point
- Colour Coded webbing to distinguish chest band from shoulder straps
- Adjustable both in Torso Height and Torso Width
- Fitted with elasticated Chest Expander
- Dual Locking Adjusters to stop any Webbing creep
- Can be worn comfortably over jackets or t-shirts
- Easily taken on and off without having to remove your head protection
- No metal components reducing isolated hot or cold spots subject to weather conditions.
- Comfortable for both male or female climbers to wear

FOOT LOOP | CAMBO (S)

Manufactured using a heavy duty treated tube webbing and a Dyneema connection loop. This elasticated foot loop is easy to fit to your foot wear. For added security your laces can be tied over the loop making it a semi-permanent fixture to the footwear.

Size: S | Ideal for Climbing Boots up to size 43
Standard: Not For Use As PPE

Part Number: **SS-5531027030**

EAN Barcode: 5060483280981

Price Ex VAT: £ 17.50

Price Inc VAT: £ **21.00**

FOOT LOOP | CAMBO (M)

Manufactured using a heavy duty treated tube webbing and a Dyneema connection loop. This elasticated foot loop is easy to fit to your foot wear. For added security your laces can be tied over the loop making it a semi-permanent fixture to the footwear.

Size: M | Ideal for Chainsaw Boots sizes 41 to 44
Standard: Not For Use As PPE

Price Ex VAT: £ 68.50
Price Inc VAT: £ 82.20

ASCENDER

The STEIN Chest Ascender is compact & lightweight. The spring-loaded latch allows easy one-handed operation whilst attaching/detaching the device to/from the rope. This ascender has a positive grip at low load even on wet, greasy and oily ropes.

Standard: EN567:97

Part Number: SS-4922970001

EAN Barcode: 5060483282619

Price Ex VAT: £ 31.00
Price Inc VAT: £ 37.20

Climbing Products

Friction Saver installation

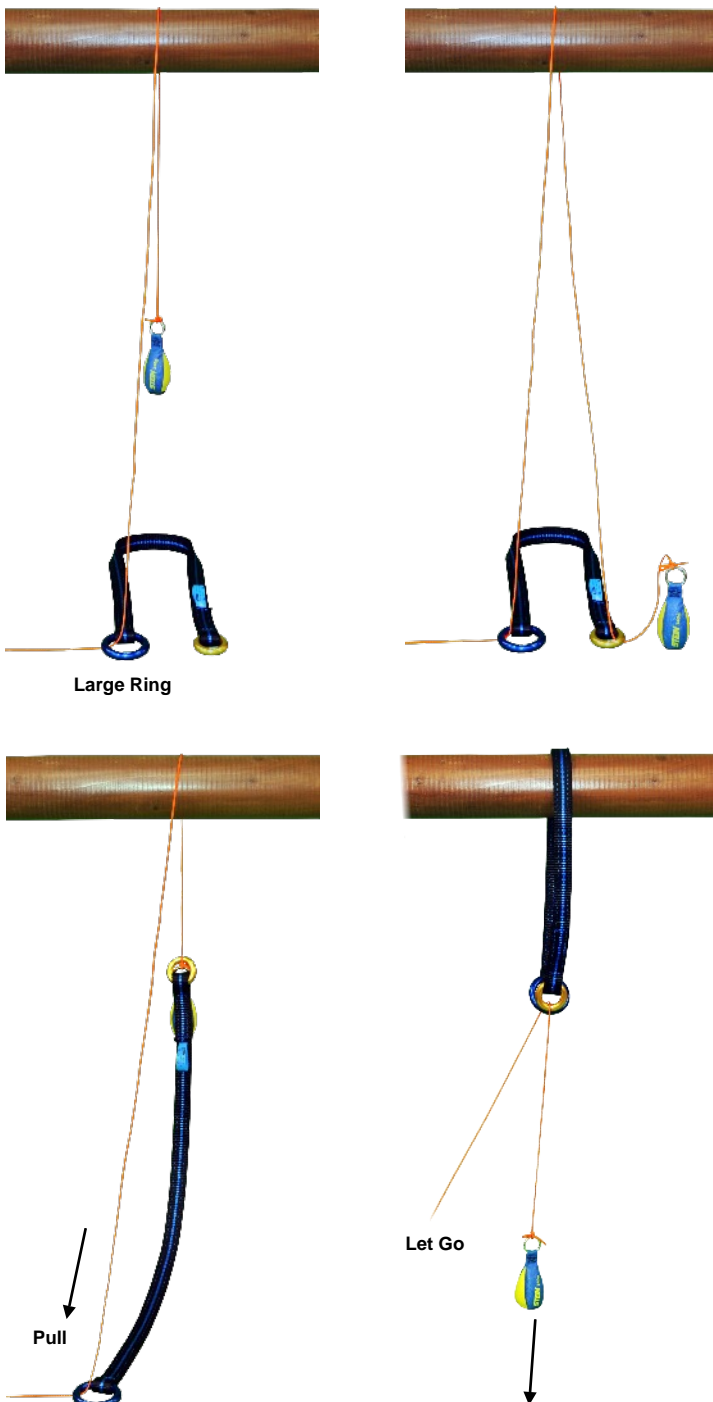

Once you have installed the throw-line it's now time to install your friction saver. Pass the loose end of the throw-line through the large ring on the friction saver.

Disconnect the throw-weight from the throw-line and pass the throw-line through the small ring and re-attach the throw-weight.

Start pulling on the un-weighted end of the throw-line; this will start to raise the friction saver. Once the friction saver reaches the anchor point give it a sharp pull flicking the friction saver over the branch.

slowly let go of the throw-line and gravity will allow the throw-weight to descend back down to the ground.

Once the friction saver is installed you can install your climbing line.

Hint:
When retrieving your Friction Saver attach your throw line to your Climbing Line to give a controlled descent of the device

FRICION SAVER | Aluminium Rings 90cm

Friction Saver otherwise known as a Cambium Saver. Manufactured from a specially designed webbing with a fluorescent stripe down the middle. Fitted with ISC aluminium rings, one Gold, one Blue for easy recognition.

Sizes: 90cm

Throw-line tip

Once you have selected your throw weight and line you need to join them together as securely as possible.

There are a few variations on attaching these items together, different people have different preferences. Some people prefer to attach their throw weight on to the line using a slipped clove hitch (1).

The benefit of the slipped clove hitch is if you don't get a good shot and need to withdraw the line the throw weight can easily be removed from the line allowing the line to be withdrawn with no risk of snagging a loop on twigs during retrieval.

A popular alternative is to tie a bowline (2) creating a large loop at the end of your throw line. Pass the loop through the securing ring and over the throw weight pulling it back to the ring creating a girth hitch attachment. This system will certainly help reduce the possibility of losing a throw weight but can create its own frustrations if either the throw weight or loop gets caught up.

LINE LAUNCHER | TEKICHU

TEKICHU, pronounced "tec-e-choo" meaning "strike home; hit the mark; bulls eye" allows the user to launch a projectile attached to a line virtually straight up and over a desired point allowing for the installation of access lines. The STEIN TEKICHU easily attaches to the STEIN Modular Poles.

Rigging is the application of specialised tools and ropes by tree workers, in order to lower cut sections of trees to the ground in a controlled manner.

Rigging operations are normally undertaken by a team of tree workers, with one worker positioned in the tree, working in conjunction with one or more other workers on the ground. In simple terms, the worker in the tree is responsible for 'rigging' the section of timber to be cut, whilst the other worker(s) assists in lowering the 'rigged' section to the ground after it has first been cut.

It is your responsibility to ensure that all the components used in a rigging operation are matched equally with their Working Load Limit (WLL) or Safety Factor (SF) or Safe Working Load (SWL). If you are unsure on a products individual specifications you should contact the manufacturer. You should never exceed the lowest rated section or component within a rigging system. When calculating any rigging system the strength of the anchor and attachment points must also be taken into account.

Rigging Equipment

LOWERING DEVICE | LD750

The Invert-A-Wrap is a lightweight and compact rope friction device. Designed to be used in either orientation and has a working load limit (WLL) of 750kg

WLL: 750kg
Rope: For use with Rigging Lines up to 12mm

Part Number: SS-LD0750

EAN Barcode: 5060483281155

Price Ex VAT: £ 99.00

Before you select a tool, think about the job you will be doing. The right tool will help you to minimize pain and fatigue during use.

Tools are designed for specific purposes, using a tool for something other than its intended purpose often damages the tool and could cause you pain, discomfort, or injury. You reduce your chances of being injured when you select a tool that fits the job you will be doing.

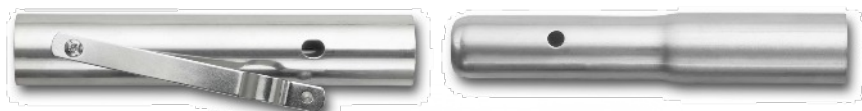

Whenever possible, choose a tool that requires the least continuous force and one that can be used without awkward postures.

Easily create your own bespoke pruning or cleaning system with these interlocking products

STEIN professional fibreglass poles are lightweight and extremely durable with a ridged feel. Each pole is fitted with male & female extension coupling which are locked together using a spring clip that is easily controlled with your thumb and forefinger. Base poles can be created by affixing a heavy-duty rubber boot to the male end.

More debris retained due to the double fine mesh

MODULAR GUARDING SYSTEM³ MK3

FROM THE DESIGNERS OF THE ORIGINAL MODULAR SYSTEM

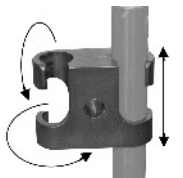

DOUBLE FINE MESH

The STEIN Modular Guarding System has been designed to offer more flexibility and personalisation over competitor systems.

This system can easily be extended within seconds without the need of dismantling and can be personalised for the job in hand. Using a durable double layered mesh with a close weave pattern allows for airflow and helps retain more debris. The MKIII Version is supplied as a simple self-assembly unit that requires no tools for assembly.

Product Size Charts

CHAINSAW Boot Sizes

When choosing your new boots ensure that you have the right size and remember that it is possible to customise the fit of a boot that is slightly too large by adding socks, but it is virtually impossible to do anything about a boot that is too small. If in doubt go for a size that is slightly larger rather than one that is too small. Properly lace up the boot, your toes should not be pushing against the front of the boots. Equally, there should not be as much of a finger width at the heel otherwise your boot is too large for you. We strongly recommend you visit your local dealership when buying new boots so you can try them on to gauge the correct size. One brand sizing may differ slightly to another brand!

Remember once boots have been worn they cannot be returned if you purchased the incorrect size.

	EURO	UK	USA
	41	7	8
	42	8	8.5
	43	9	9.5
	44	10	10
	45	10.5	11
	46	11	10.5
	47	12	12.5

Understand the washing symbols:

Excessively high washing temperatures or drying of the clothing in an electric dryer will reduce the protective functionality and the wearing properties of a garment. Therefore it is important that you fully understand washing symbols and instructions to individual garments.

	Normal wash at 40 degrees C
	Do Not Iron
	Do Not Tumble Dry
	Do Not Dry Clean
	Do Not Bleach With Chlorine
	Drip Dry Only

Cut protection clothing requires special care and should be cleaned regularly. Contamination of clothing (by, for example, tree resins, oil or fuel residues) can have a negative effect on the functionality of the cut protection. The number of times the clothing is cleaned or washed can also (due to the mechanical effects of a washing machine) reduce the effectiveness of the cut protection within the clothing. In order to ensure the best possible protection from a product, the User Instructions for cleaning and care should always be observed.

- ALWAYS READ THE USER NOTICE FIRST**
- With a hand brush remove excessive dirt and saw dust
- Turn all the pockets inside out to remove any saw dust, then fasten the pocket zippers
- Fasten the fly zipper & button
- Place the trousers in a conventional washing machine at 40 degrees Celsius
- Use conventional household detergent but NEVER use fabric softener.
- Once washed, turn the trousers inside out and pull the cut protective clothing into shape whilst still damp
- Air Dry only - DO NOT place in a Tumble Dryer.
- Once dry check the trousers for any damage (snags or cuts). Repair as necessary according to the manufacturers' instructions

When selecting the correct size of trouser the lower figure is based on the waist being relaxed whereas the higher figure is based on the waist being fully stretched. Please allow for freedom of movement when selecting the correct trouser size. Trousers should always be worn with a belt or braces ensuring the trousers are worn correctly.

X25 Hi-Viz T-Shirts

	XS (20)	S (30)	M (40)	L (50)	XL (60)	XXL (70)

The above European Standards known as EN (European Norm) Standards where adopted in the UK will also be issued with a British Standards prefixed of BS. The British versions of standards will look like this BS EN, BS ISO or BS EN ISO. The Standards listed are the base standard with relevant sub-standards below. Refer to the BSI Website for full details.

Harmonised European Standards for Personal Protective Equipment (PPE) have been developed as the preferred means of demonstrating equipment conformity with the basic health and safety requirements of the EC Personal Protective Equipment Directive (89/686/EEC) soon to become the PPE Regulation. Only equipment which meets these requirements are entitled to carry the CE mark and to be sold for use in the EC. Want to know more? Please refer to the BSI Website for details.

Users of this type of equipment must always ensure that all components of a work system are suitable for the foreseeable loadings that may be applied during use. Poor technique and incompatibility of products can cause catastrophic failure and should always be avoided. Where a possible failure of a device or system may occur, a suitable backup system should always be installed and used with a full rescue system installed or available.
